

Cones and bollards are very convenient devices for temporary delineation or marking out and have a number of potential uses:

- \* traffic control (day and night)
- \* work site delineation
- \* pedestrian safety
- \* public or sporting events / coaching equipment
- \* anytime when clear, temporary delineation is required.

Cones are stocked in the more common 300mm, 450mm and 700mm sizes. They can be supplied with a reflective band which complies with the appropriate Australian Standard as an optional extra if required.

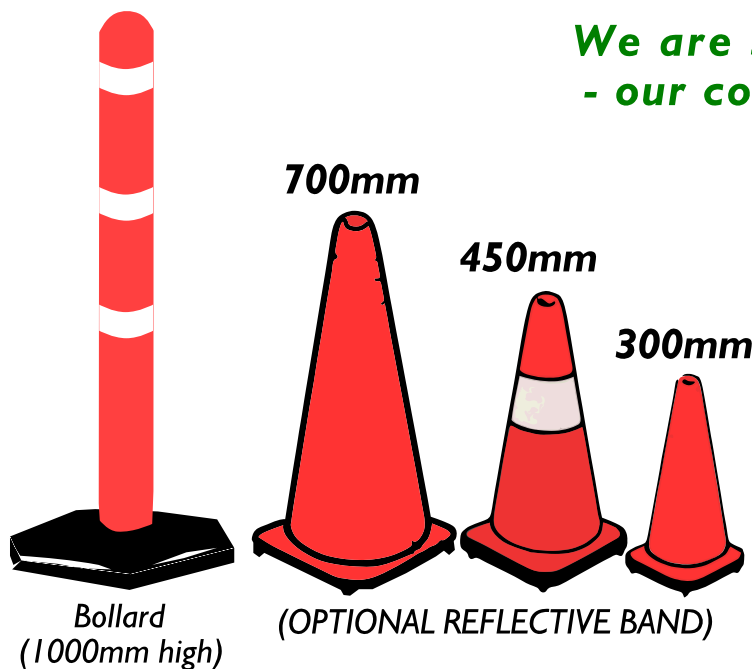

Bollards are available in the one standard size (1000mm) and are complete with reflective bands.

Permanent marking of cones is available as an optional extra. This is done by building your identifier into the cone as it is being manufactured.

It is surprisingly economical.

**We are supporting Australian industry  
- our cones are 100% Australian made.**
